Designer Series Shower Pan Extends Showers' Elegant Design
Shower pan features a low profile and high-end appearance in a water-tight envelope

Caldwell, Idaho – Best Bath Systems, a leading manufacturer of showers and tubs, introduces its new Designer Series shower pan. Inspired by a residential contractor, the new shower pan comes with custom molded recesses to set tile, enabling the elegant aesthetic to flow from shower wall to floor. Featuring a linear trench drain, the pan enhances the shower's clean and modern design.

The pan's linear trench drain provides an elegant design and safe access to the shower. In addition, the pan eliminates the worry of leaks and maintains a water-tight seal in the shower. Designed for easy installation, these shower pans come pre-leveled from the factory.

Complete the shower's high-end appearance by adding tile from 3/8 to 1/2 inches thick. Customers install the tile of their choosing making the shower their ultimate space. Because the tile is recessed

within the shower, the possibility for leaks is eliminated and there are no concerns about future water damage.

Designer Series shower pans can be paired with Best Bath Designer Series shower walls or used with tile walls for an elegant design without the fear of future leaks. When used with Best Bath shower walls, installation is fast and simple

Best Bath offers five standard colors -- white, bone, biscuit, linen, and ivory -- with custom colors available the design possibilities are unlimited. The shower pans are backed by Best Bath's industry leading 30-year warranty.
