New Shower System Merges Revolutionary Technology and Modern Design
SpringClip™ technology and subway tile pattern provides high-end shower design

Caldwell, Idaho – Best Bath Systems, a leading manufacturer of showers and tubs, introduces the industry’s first and only composite shower to feature 90-degree corners with sleek subway tile using its exclusive SpringClip™ system. This new shower has the ceramic tile appearance of a high-end shower with lower installation costs and worry-free maintenance.

Developed exclusively by Best Bath, the SpringClip™ system provides the easiest installation yet for shower walls. Taking it a step further to revolutionize the bathing industry, this new shower model comes with 90-degree corners, the first and only of its kind, and the modern look of subway tile. The clean, sleek aesthetic comes without the hassle of traditional installation or worry of future leaks. Showers are backed by Best Bath’s industry leading 30-year warranty.

Best Bath's signature composite construction incorporates a durable gelcoat for a luxurious finish and a full plywood backing for outstanding strength. An extensive range of models provides options for colors, custom tile inset locations, tile wall patterns, and accessories.

The showers can be specified with a range of features for residential and commercial applications, and can be paired with Best Bath's complete line of shower pans including curbed,

ADA- and ANSI-compliant installation, including Best Bath's new Designer Series shower pan.

Additional accessories include a seat, grab bars, a glide bar/hand shower, non-recessed soap dish, collapsible water stopper, curtain and rod, and shower valve. The plywood backing makes installation of accessories simple, eliminating the need to find a wall stud or to include additional backing.
